

PMG Advisory: Client Intake Questionnaire

Client: Discover Me Radio / NETWORKX - Tanaka & Merquise

Advisor: Power Music Group - MYKEL T Brooks

Section 1: Business Identity & Vision

1. The Elevator Pitch

Discover Me Radio, operating as NETWORKX, is a live radio, music discovery, and creative marketplace built by artists, for artists.

NETWORKX helps independent artists gain verified exposure, prove demand through community voting, and sell full tracks directly to listeners after a 30-second preview. The platform combines live radio, artist promotion, fan voting, direct-to-fan sales, livestreaming, creative services, and community-driven discovery into one ecosystem.

Our long-term vision is bigger than becoming another streaming platform. We want NETWORKX to become the people-powered label: a discovery and talent development system where the audience helps decide what rises, artists can build real demand, and creative talent is no longer wasted because of gatekeeping, poor visibility, or lack of opportunity.

2. Target Audience

Our primary listeners are music fans we call Prospectors. These are people who are tired of repetitive algorithm-driven playlists and want to discover underground artists live, vote on new music, support songs they believe in, and be part of finding the next wave of talent before the mainstream catches on.

Our primary B2B customers are independent artists across Rap/R&B, Rock/Alt, EDM, and other emerging genres who need exposure, audience feedback, community validation, and direct monetization.

A major secondary B2B audience is creative service providers through PRO-NETWORKX. This includes engineers, producers, photographers, videographers, designers, mentors, stylists, event workers, and other freelancers. Over time, PRO-NETWORKX can expand beyond music into any creative or service category where there is market demand - even niche skills such as custom knitting, set design, choreography, voice work, consulting, or other freelance talent.

The larger goal is to build a community of creatives who work together, help each other grow, gain experience, and share in mutual success.

3. Competitive Edge

NETWORKX is not built like a traditional streaming app where independent music gets buried in an algorithm. It is built like a live, ranked discovery system where the community has real influence.

- Verified listener exposure: Artists can seed music into a listener pipeline designed to track real delivery and engagement.
- Community voting: Listeners can vote music up or down, giving artists honest feedback and helping the strongest songs rise.

- Direct monetization: Artist pages offer a 30-second preview for free; listeners must purchase the full track for full playback and downloads.
- Live radio discovery: Music is experienced in a live environment, creating urgency, energy, and community participation.
- The Refinery: A talent development and filtering layer where promising artists can be refined, evaluated, promoted, and prepared for bigger opportunities.
- PRO-NETWORX: A creative services marketplace that can help artists and freelancers find work, build relationships, collaborate, and grow together.
- People-powered label model: Instead of industry executives alone deciding who deserves a chance, NETWORKX allows the audience to help identify demand.

The difference-maker is that NETWORKX does not only let people like or stream music passively. It gives the community a voice through both positive and negative voting, while giving artists a direct path from discovery to revenue.

Section 2: Monetization & Baseline Metrics

4. Current Revenue Streams

- [x] Artist Discovery Placements: Artists pay \$1.99 to seed a track into the NETWORKX discovery pipeline with a target delivery of 1,000 verified listener exposures.
- [x] Direct Marketplace Sales: Listeners can purchase full songs after hearing a 30-second preview. Purchased songs unlock full playback and download access.
- [x] Livestream Advertising: We plan to run audio and visual ads during livestreams, including sponsor reads, display placements, branded breaks, and event-based advertising.
- [x] Website / Platform Advertising: We plan to include visual ads across the web platform, including banners, promoted placements, and sponsor visibility.
- [x] PRO-NETWORX Subscriptions / Listings: Future monetization through creative service provider profiles, premium visibility, subscriptions, lead generation, and networking tools.
- [x] Live Events: Future monetization through showcases, battles, listening sessions, ticketed events, sponsorships, and artist/vendor participation.
- [] Listener Subscriptions
- [] Brand Sponsorships / Partnerships

5. Current Monthly Revenue

\$0 currently - we are in the pre-launch / alpha-beta architecture phase and preparing the marketplace, radio, livestreaming, analytics, and ambassador rollout before public launch.

6. Listener Metrics

- Average Monthly Active Listeners: Currently in alpha/beta testing; exact number to be updated after broader tester onboarding.
- Average Listener Session Time: Baseline analytics are being established through Sentry, backend logs, Supabase metrics, and upcoming product analytics instrumentation.

- Key Metrics We Need to Track: Verified listener delivery, song votes, downvotes, preview-to-purchase conversion, livestream attendance, average listening time, repeat listeners, artist upload frequency, and ad engagement.

Section 3: Technical Infrastructure & System Access

7. App Distribution & Codebase

- iOS App Store Link: Pending
- Google Play Store Link: Pending
- Codebase Host: GitHub

8. Streaming & Server Infrastructure

NETWORKX uses a full-stack architecture with a Flutter mobile app, Next.js web platform, and NestJS backend API. The database and storage layer is handled through Supabase, backend hosting is currently on Railway, and web deployment is handled through Vercel. Redis is used for live radio state, listener counts, and real-time system coordination.

The live streaming system supports mobile/web broadcasting and external encoder workflows, allowing DJs and artists to stream directly from a device or through software such as OBS.

9. Data & Analytics

We use Sentry for error reporting, crash visibility, and backend/web monitoring. We also use Supabase logs and database metrics for operational visibility.

During the next 90 days, we want to strengthen analytics around listener behavior, preview-to-purchase conversion, artist upload activity, campaign delivery, livestream engagement, retention, and verified listener exposure. The goal is to make artist placements measurable, so each campaign can show delivery, engagement, votes, downvotes, and purchase activity.

10. Payment Processing

Payments are processed through Stripe. Stripe will support artist discovery placements, track purchases, livestream-related payments, advertising payments, and future marketplace payment flows.

As the marketplace matures, we may use Stripe Connect or a similar payout structure to support artist payouts, service-provider payouts, event revenue splits, and future partner compensation.

Section 4: Roadblocks & 90-Day Goals

11. The Biggest Bottleneck

The biggest bottleneck is not only technical - it is also market adoption.

Technically, we are completing the transition from a pure live radio product into a secure music marketplace. We need to finalize the 30-second preview system, artist/admin trim controls, preview-file generation, secure full-track delivery through signed URLs, and purchase verification so only verified buyers can stream or download full songs.

From a business standpoint, the biggest challenge is getting listeners to download and use a platform they have never heard of before. That means our marketing has to be strong, consistent, and culturally clear. We need people to understand why NETWORKX is different, why their vote matters, and why discovering artists here is more exciting than passively using existing platforms.

Another bottleneck is scaling the supply of quality music quickly enough. If we do not consistently onboard good artists and strong songs, listeners may not have enough exciting options to keep them engaged. The platform depends on having a steady flow of quality uploads, live activity, community participation, and creative opportunities.

We also need to strengthen business banking, payout structure, artist onboarding, copyright controls, campaign reporting, ad operations, and internal systems so artist revenue and marketplace activity can be handled properly.

12. Definition of Success

A successful 90-day phase means NETWORKX has a functioning marketplace, a live radio growth engine, and the foundation of a recognizable creative movement.

1. A working preview-to-purchase flow where users can hear 30-second previews, buy full songs, and download or replay purchased tracks.
2. Successful onboarding of the Founding 100 artists and brand ambassadors across Rap/R&B, Rock/Alt, EDM, and other strong creative scenes.
3. Verified listener delivery for artist placements, including the ability to track that each \$1.99 placement reaches the promised listener exposure target.
4. Consistent weekly uploads, listener engagement, votes, downvotes, and early daily track purchases from the discovery pipeline.
5. Clear analytics reporting for listener activity, preview conversion, purchases, artist growth, campaign performance, livestream attendance, and ad engagement.
6. The first NETWORKX live events, showcases, listening sessions, or artist battles.
7. The app beginning to spread beyond the local market into other states through ambassadors, artists, events, and social content.
8. Public recognition through a label, studio, venue, influencer, school, media outlet, or strategic music industry partnership.
9. Early PRO-NETWORKX activity, with creative service providers using the platform to find work and collaborate.
10. A clear path toward NETWORKX becoming more than a platform - a community-powered label and creative economy.

Closing Note

We are looking for PMG's support in tightening the business infrastructure, marketing channel setup, creator onboarding process, commercial architecture, event strategy, and partnership strategy so NETWORKX can launch with a clear artist acquisition funnel, strong analytics, reliable campaign reporting, and a revenue model that directly rewards independent artists.

The mission is simple: No more wasted talent.

NETWORKX exists to help undiscovered artists, creatives, and service providers find opportunity, build community, and win together.
